

ISD Info Solutions

4-Channel Content Plan — Naming, Data & Build Strategy

1. Channel Naming

The ***Intel** family is the strongest option — it presents all four properties as one connected intelligence network while allowing each channel its own audience and editorial identity. **Risk:** the word "Intel" carries trademark exposure — verify availability before finalizing. If blocked, use the **Signal** family as the fallback.

Vertical	Primary (recommended)	Alternate A — "Signal"	Alternate B — "Pulse"
Education	EduIntel	EduSignal	EduPulse
Share Market	MarketIntel	MarketSignal	MarketPulse
AI Trends	AIIntel	AISignal	AI Pulse
Digital Marketing	GrowthIntel	GrowthSignal	GrowthPulse

- **Umbrella name for the network:** ISD Intelligence Network (or "Insights by ISD"). Footer on all four sites: "A property of ISD Info Solutions."
- **Domain strategy:** check .com and .in availability for all four on the same day. If budget is tight, launch as subdomains (e.g., edu.isdinfosolutions.com) and migrate later.

2. Data Collection Plan (per channel)

Shared record schema for every item collected: source, source_tier (T1 official / T2 trade press / T3 discovery only), url, title, published_at, category, tags, summary, attribution, status

Channel	T1 sources	Content categories	Competitors to map
EduIntel	UGC, Ministry of Education, AICTE, NAAC/NIRF, PIB (education), AISHE data	Admissions, UGC regulations, NEP 2020, rankings, EdTech, placements	Careers360, Shiksha, EdTechReview
MarketIntel	NSE, BSE, SEBI circulars, RBI, PIB (economy)	Market wrap, IPOs, quarterly results, FII/DII, macro, explainers	Moneycontrol, ET Markets, Tickertape
AIIntel	OpenAI, Anthropic, Google DeepMind, Meta, Mistral blogs; Hugging Face; arXiv (cs.AI); MeitY/IndiaAI	Model releases, agents, tools, enterprise AI, regulation, tutorials	The Rundown, Analytics India Magazine
GrowthIntel	Google Search Central + Search Status Dashboard, Google Ads blog, Meta newsroom, LinkedIn, Think with Google	SEO, AEO/GEO, AI search, ads, GA4/attribution, CRO	Search Engine Land, Ahrefs/Semrush blogs, Social Samosa

Compliance flags:

- **MarketIntel:** no buy/sell tips or recommendations — SEBI regulates investment advice. Content stays strictly informational and educational, with disclaimers.
- **All channels:** use T1 sources, add original analysis, attribute clearly — no republication of third-party articles. Enforced through ingestion rules.

3. Shared Sitemap Template (all four sites)

```
/ → latest + category tiles + newsletter box
/category/[name] → category hubs
/topic/[evergreen] → cluster pages (e.g., /nep-2020/, /ipo-guide/, /geo-guide/)
/article/[slug] → NewsArticle schema, source attribution, ISD CTA block
/tools/ → lead magnets (college finder, IPO tracker, etc.) – phase 2
/newsletter, /about
→ Footer: "A property of ISD Info Solutions" + relevant ISD service CTA
→ sitemap.xml, robots.txt, per-category RSS
```

4. Build Order

1. Audit the existing ISD sitemap — map overlaps and gaps against the four channels.
2. Collect and normalize T1 data for all four channels (education channel first).
3. Finalize brand names after trademark and domain checks.
4. Review the complete dataset against this plan.
5. Begin the website build in the existing project repository.

5. First Deliverable

EduIntel starter dataset:

- ISD education offerings mapped to content opportunities
- Keyword clusters and topic priorities per category
- Complete EduIntel sitemap and content taxonomy
